RS Momentum Screener: Live Trade Results

Harminder Singh, CMT · EPAT (QuantInsti) | NSE stocks · January – October 2026 · real trades in two accounts

A relative-strength screener built on the JdK RS-Ratio / RS-Momentum method. Every trade taken from its signals in two live accounts (mine and a client's) is listed here: **23 closed trades, 17 winners (74%)**, an average gain of **+7.0% per trade** and **₹3.33 lakh** of realised profit, with three positions still open and in profit.

How it works

Each stock is measured against the Nifty 500 on two things: its **relative strength** (is it beating the index?) and its **momentum** (is that strength rising or fading?). Together they place the stock in one of four quadrants, and stocks tend to rotate clockwise through them.

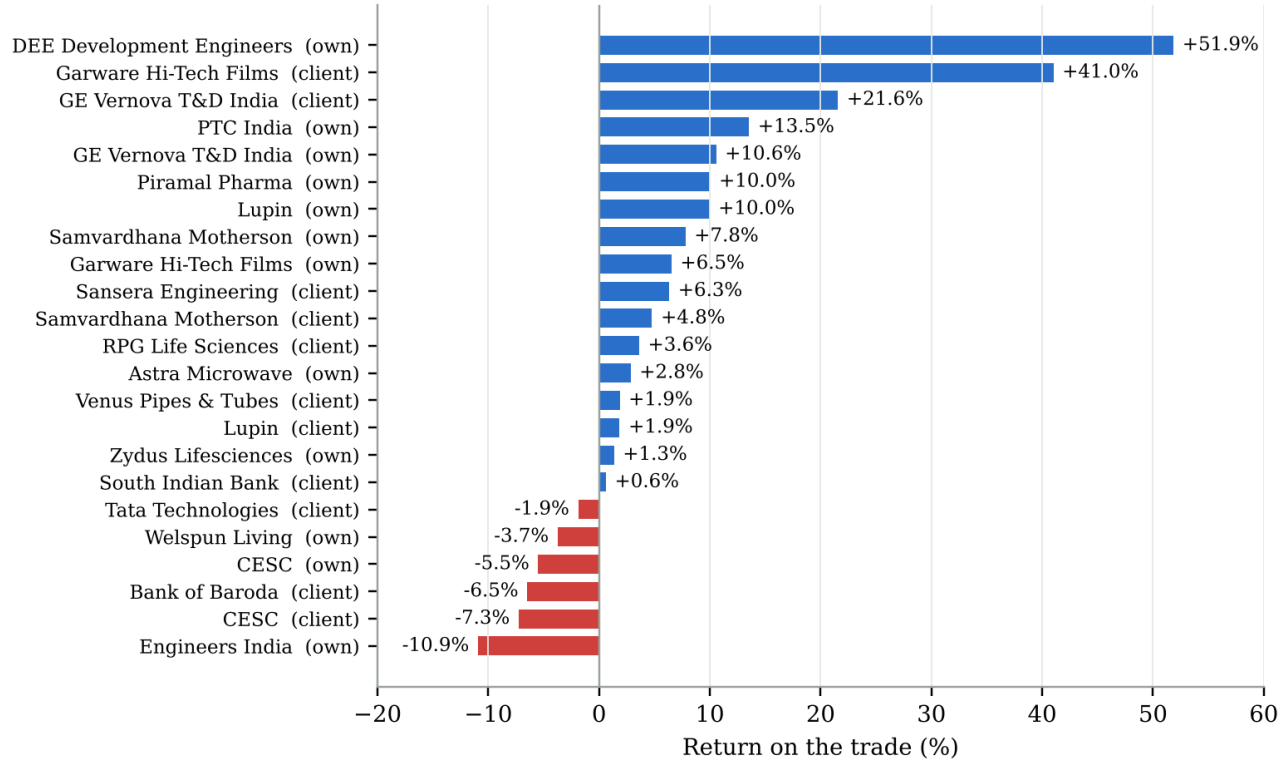

The screener looks for stocks **turning from weak to strong**, before they reach the Leading quadrant. It uses faster smoothing than the standard method so turns show up earlier. Exact settings are proprietary.

Results

	My account	Client account	Combined
Closed trades	12	11	**23**
Winners / losers	9 / 3	8 / 3	**17 / 6**
Win rate	75%	73%	**74%**
Average gain per trade	+7.9%	+6.0%	**+7.0%**
Average winner / loser	+12.7% / −6.7%	+10.2% / −5.2%	**+11.5% / −6.0%**
Profit factor	5.5	6.0	**5.8**
Realised profit	₹1.41 lakh	₹1.92 lakh	**₹3.33 lakh**
Open positions (unrealised)	1 (+₹1,311)	2 (+₹46,057)	**3 (+₹47,368)**
Best / worst trade	+51.9% / −10.9%	+41.0% / −7.3%	**+51.9% / −10.9%**

Profit factor = total gains ÷ total losses. Figures are before brokerage and taxes.

Every closed trade

Return on each closed trade, worst to best. Blue = profit, red = loss.

What stands out

- **Winners are about twice the size of losers** (+11.5% against −6.0%), so the edge does not depend on a high win rate alone.
- **A few runners make a big difference:** DEE Development Engineers (+51.9%) and Garware Hi-Tech Films (+41.0%) were caught early in their moves.
- **The signals repeated across both accounts.** PTC India, Lupin, GE Vernova T&D, Samvardhana Motherson, Garware, Piramal Pharma and CESC were taken in both, with the same direction of result each time.
- **Losses stayed contained:** the worst trade lost 10.9%.

Trade list

Account	Stock	Qty	Bought (₹)	Sold (₹)	Profit (₹)	Return	Status
Mine	DEE Development Engineers	100	41,555	63,102	+21,546	+51.9%	Closed

Client	CESC	2,000	377,189	349,812	-27,377	-7.3%	Closed
Client	PTC India	1,000	176,765	—	+25,065	+14.2%	Open
Client	Piramal Pharma	1,000	178,758	—	+20,992	+11.7%	Open

Open positions are valued at the last market price on the statement. "Bought" and "Sold" are total trade values.

Notes

These are real trades from broker statements for January – October 2026, not a backtest. All trades taken from the screener in both accounts are included, losers too. Profits are before brokerage and taxes. With 23 closed trades the sample is small, so the figures are indicative. Client details are withheld.
